

HELD-OUT SUBJECT s

cut once, stratified — 288 / 80 / 45 trials each half

available C_s

reserved T_s

all a condition may use

scored, never trained on

SOURCE POOL — $N-1$ SUBJECTS

every trial used, in every condition

training 80%

sel. 20%

one stratified cut, fixed across conditions

supervise
on C_s

align on C_s

not aligned

aligned

not supervised

SRC

reads: none

trained on source subjects only

EA

reads: signals

whitener fitted on C_s , frozen

supervised

SUP

reads: signals labels

C_s joins the training set

EA+SUP

reads: signals labels

both, on the same C_s

✓ IDENTICAL

Scored on T_s

the same reserved
trials, in the same
order, in all four

supervising reads the same signals alignment does — the grid crosses procedures, not kinds of access
